RE: M2Z Nationwide Wireless Broadband Internet (WT Docket **07-16**)

Dear Mr. Chairman,

Family Watch International is a 501(c)(3) organization whose mission is to strengthen the family and to promote family values. We work to accomplish these goals at the international level as well as at the national level in a number of countries including the United States.

It is clear that "information age" technologies such as the Internet, especially high speed access to the World Wide Web, are providing great benefits to families in the United States and around the world. We recognize the need to be actively working to extend these benefits to more and more families and we support these efforts.

But at the same time, it is also becoming increasingly clear that the ready access to all kinds of information that the Internet affords has also created very serious threats to the family and family values both here and around the world. Without question, the most serious of these is the ready availability of pornography and other sexually explicit material on the Web.

We now know that some individuals can actually become addicted to pornography. When this happens to one spouse in marriage, usually the husband, it can cause such serious dysfunction that the marriage itself is often jeopardized. Many individuals addicted to pornography require extensive psychotherapy, and it is the cause of the breakup of many families.

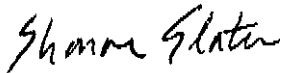

At the same time, we also know that the easy access to pornography and other sexually explicit material that is too often readily available to our children and adolescents can have a very detrimental effect on their personal

and social development. We do not fully understand all of the negative impacts this material can have on them as they grow to adulthood, but we do know enough to be certain that it is not healthy and that they should be shielded from this material to the maximum possible extent.

For these reasons we support the efforts of M2Z to extend the benefits of the high speed Internet access to more families in the United States, but at the same time incorporate a very sophisticated filtering system to allow adults to block pornography and similar objectionable content. This provision for "clean" Internet access will provide families with all the many benefits of the Internet while eliminating some of the potential harmful impacts.

Accordingly, we strongly encourage the Commission to seriously consider in a timely manner M2Z Networks' proposal to provide this responsible nationwide wireless broadband Internet service.

Sincerely,

Sharon Slater  
President  
Family Watch International
